NOTE: This is a 'working draft' sequence. It currently consists of 67 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (bases 1 to 178639)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed contribution. In the other contribution in the printed contribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CO) an AKK domain composed of ankyrin repeats.

SPANK is a cytosolic protein which can poly(ADP-ribosyl)ate itself.

SPANK is a cytosolic protein which can poly(ADP-ribosyl)ate itself.

SPANK is a cytosolic protein which can poly(ADP-ribosyl)ate itself.

SPANK is a cytosolic protein which can poly(ADP-ribosyl)ate itself.

SPANK binds insulin-responsive aminopeptidase [IRAP] and modulates

translocation of GLUT4 in the perinuclear region of adipocytes. It
is an effector in the insulin signalling pathway in eukaryotic cells.

SPANK is useful for reducing body mass, reducing glucose

intolerance or insulin resistance, for preventing or treating

obesity-related diseases or disorders, such as obesity, cardiac

insufficiency, coronary insufficiency, stroke, hypertension,

atheromatous disease, atherosclerosis, high blood pressure, non-insulin

dependent diabetes, hyperlipidaemia, hyperuricemia and Syndrome x and is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC Sequences AAS35741-AAS36942 represent genomic DNA molecules, which encode CC the cardiovascular system antigen polypeptides of the invention. CC Cardiovascular system antigens and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of CC chickens or sheep. A pathological condition can be determined by CC detecting the presence or absence of a mutation in a cardiovascular cystem antigen polynucleotide. The treatable disorders include autoimmune CC system antigen polynucleotide. The treatable disorders liciude autoimmune CC diseases such as rheumatoid arthritis, hyperproliferative disorders such as cardiovascular disorders such as recardiovascular disorders such as cardiovascular disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal contection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as premature labour and infertility, cas glomerulonephritis and respiratory disorders such as asthma and construction, to regenerate tissues and in chemotaxis.

CC prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis.

CC prevent skin aging due to sunburn, to maintain part of the printed specification, but was obtained in electronic format directly from WIPO cc at fig. wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               flavin-containing monooxygenase; FMO; gamma-glutamyltransferase 5; dipeptidase; DP; glucose 6-phosphate dehydrogenase; G6PDH; haplotype; phosphogluconate dehydrogenase; PGDH; drug metabolism; phenotype;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; biallelic marker; single nucleotide polymorphism; SNP; MGSTII; microsomal glutathione S-transferase II; malate decarboxylase enzyme; DME1; ME1; cytochrome P450; glutathione reductase; GSHR; GSHS; GGT5;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAH51547 standard; DNA; 756
Sequences AAH51110-AAH51593 represent human DNA fragments which contain biallelic markers. The sequences are related to various human genes including microsomal glutathione S-transferase II (MGSTII), malate decarboxylase enzyme (DME1/ME1), cytochrome P450, glutathione reductase/synthase (GSHR/GSHS), flavin-containing monooxygenases (FMO),
                                                                                                                                                                                                                                                     Polynucleotides comprising sequences from malate decarboxylase enzyme-related biallelic markers used for genotyping -
                                                                                                                                                                                                                                                                                                                                                                                                                Blumenfeld M,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        25-MAR-1999;

CC Sequences ANH51594 - ANH51598 represent the genomic sequence of the

CC MGSTII gene and four alternative MGSTII cDNA sequences. ANB62906-ANB62906

CC are MGSTII gene products. PCR priners ANH51599 and ANH51600 are used in

CC an example for the amplification of human genomic DNA fragments. The

CC invention includes a method of genotyping comprising determining the

CI inventity of a nucleotide at a DME- or MGSTII-related biallelic marker in

CC a biological sample. The method is used to determine the frequency in

CC population of an allele of a DME- or MGSTI-related biallelic marker and

CC population of an individual for inclusion in a clinical trial of a drug

CC treatment. The method is also used to detect association between allele

CC and phenotype, and to detect association between haplotype and phenotype.

CC The polynucleotides are used, in hybridization assays, sequencing assays

CC or allele specific amplification assays. The method can be used to

CC determine whether an individual suffers or is at risk of developing

CC assume or is at risk of developing hepatoxicity on treatment with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gamma-glutamyltransferase 5 (GGT5), dipeptidase (DP), glucose 6-phosphate dehydrogenase (G6PDH), phosphogluconate dehydrogenase (PGDH), and uridine diphosphate glucoronosyl transferases (UGT2). Each of these sequences contains a biallelic marker/polymorphism, which is represented in the sequence as a degenerate/undefined base. The genes to which the biallelic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; biallelic marker; single nucleotide polymorphism; SNP; MGSTII; microsomal glutathione S-transferase II; malate decarboxylase enzyme; pMEI; MEI; cytochrome P450; glutathione reductase; GSHR; GSHS; GGTS;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC bhallelic markers. The sequences are related to various human genes.

CC charlelic markers. The sequences are related to various human genes.

CC decarboxylase enzyme (DMEI/MEI), cytochrome P450, glutathione

CC decarboxylase enzyme (DMEI/MEI), cytochrome P450, glutathione

CC reductase/synthase (GSHR/GSHS), flavin-containing monoxygenases (FMO),

CC gamma-glutamyltransferase 5 (GGTS), dipeptidase (DP), glucose 6-phosphate

CC diphosphate glucoronosyl transferases (UGT2), Each of these sequences

CC contains a biallelic marker/polymorphism, which is represented in the

CC sequence as a degenerate/undefined base. The genes to which the biallelic

CC marker containing sequences are related are involved in drug metabolism.

CC sequences AAH51594 - AAH51598 represent the genomic sequence of the

CC MSTII gene and four alternative MGSTII CDMA sequences. AAB62905-AAB62905

CC are MCSTII gene products. PCR primers AAH5159 and AAH51600 are used in

Invention includes a method of genotyping comprising determining the

CC identity of a nuclectide at a DME- or MCSTII-related biallelic marker in

CC abiological sample. The method is used to determine the frequency in

CC to select an individual for inclusion in a clinical trial of a drug

treatment. The method is also used to determine the frequency in

CC to select an individual for inclusion in a clinical trial of a drug

treatment. The method is also used to detect association between allele

CC The polynucleotides are used, in hybridization assays, sequencing assays

CC asthma or is at risk of developing hepatoxicity on treatment with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The ReproSA-1 polypeptide, it's fragments, or nucleic acid encoding them are used in contraceptive vaccines to generate an anti-sperm response. Antibodies can also be used as topical contraceptive (spermicide), also antisense sequences, ribozymes and triplex-forming molecules. Detection, by reaction with immobilised peptides, of anti-(I) antibodies (in serum, semen, saliva, cervical or vaginal mucosa) is used to diagnose immunological infertility and to monitor the effect of vaccination. nucleotide fragments are used to diagnose infertility-associated mutations in the gene encoding Repro-SA, and for Isolation of related sequences. Peptides and anti-idiotypic antibodies against the antibodies are used to inactivate the antibodies i.e. to increase fertility and may be added to sperm samples before in vitro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sperm-specific polypeptide ReproSA-1 and related nucleic acid transformed cells and antibodies, useful in contraceptive vaccines or compositions, and for diagnosis and treatment of infertility

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG1676-ABL30511), expressed DNA sequences (ABL08737-ABB16175) and the encoded proteins (ABB5737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                           The invention relates to a polypeptide having GT1209, GT1354 or GT0946 activity obtained from Arabidopsis. The invention may also be applied to the development of herbicide tolerant plants, plant tissues, plant seeds and plant cells. The polypeptide is useful as herbicide targets in screening assays to identify potential herbicides and inhibitors of GT1209, GT1354 or GT0946 scitvity. A compound having herbicidal activity is useful for suppressing the growth of a plant. The newly discovered GT1209, GT1354 or GT0946 genes are essential for seeding growth and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      mRNAS encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens.
The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change i expression of at least one gene (I) of a signature gene set, where (I)
                                                                                                                                             Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                13-DEC-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine
                                                                                                                                                                                                                                                                                                                                          25-MAY-2000;
09-JUN-2000;
18-JUL-2000;
13-DEC-2000;
                          The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) useful for:

(a) assessing whether a patient is afflicted with prostate cancer;

(b) monitoring the progression of prostate cancer in a patient;

(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   infiltrating lobular cancer, squamous cell carcin carcinoma, papillary carcinoma and Wilm's tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 342 BP; 36 A; 109 C; 92 G;

```

the efficacy of a therapy for inhibiting prostate cancer

```
CC in a patient;
CC (e) selecting a composition for inhibiting prostate cancer in a patient;
CC (f) assessing the prostate cell carcinogenic potential of a compound;
CC (g) determining whether prostate cancer has metastasized in a patient;
CC (h) assessing the aggressiveness or indolence of prostate cancer in a
CC patient;
CC (I) is also useful as a pharmacodyanamic or pharmacogenomic marker.

Soares Lab Clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENERICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP cDNAs whose availability will be considered under appropriate and limited collaborative arrangements The tissue for this library was contributed by Dr. Xin-Yuan Pu, Yale University School of Medicine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       24;
